

Meet Compliance, e-Discovery, & Consolidation Goals for All Your Message Types

Merge1™ facilitates messaging compliance by ingesting and consolidating various forms of electronic communication into Enterprise Vault (e.g. Bloomberg messages, proprietary Instant Messages, Faxes, Blackberry, etc.).

Merge1 acts as a single, unified platform which handles many message formats. The application is both modular and **customizable**. Enterprises can select only those message types that apply to them or can customize/expand Merge1 to ingest any message type required for retention (i.e. that is not already included in the standard Merge1 package).

Built on the success of Globanet's Bloomberg Importer tool, Merge1 has the ability to handle the following message types 'out of the box':

MERGE 1 PLATFORM	BLOOMBERG MAIL
	BLOOMBERG IM
	BLOOMBERG CHAT
	EML
	SKYTEL
	BLACKBERRY SMS
	BLACKBERRY PIN-TO-PIN
	MERRILL CHAT
	UBS CHAT

Globanet can create additional modules to capture message types that are not included in the base Merge1 product. Some of the modules above are currently in development. Additional 'out of the box' modules are being added, and Globanet can customize Merge1 to add modules for any message type desired. Future integration includes direct ingestion into Enterprise Vault and Domino compatibility via SMTP routing.

BENEFITS

- Reduces compliance and legal risk by enabling discovery of important communications sent via enterprise messaging systems
- Saves time and money by eliminating the need to deploy multiple ingestion applications for multiple message types (Merge1 provides a single platform for all message types)
- Saves storage space and reduces management overhead by merging disparate data sources into one centralized archive
- Offers freedom through easily customizable filtering and exporting options

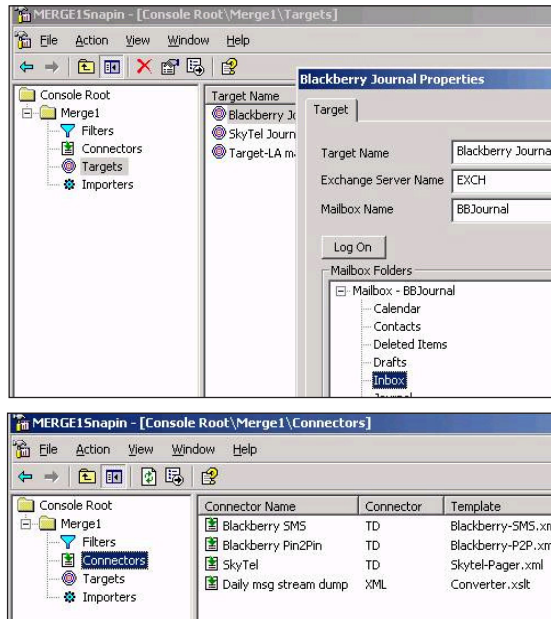

Merge1™

Messaging Compliance and Consolidation Made Easy

KEY FEATURES

- 1 Ability to customize or extend the platform to any message type
- 2 Powerful built-in filters allow for 'selective' archiving and flexible routing
 - Archive only messages that are relevant to your department (e.g. only messages pertaining to Trading Desk)
 - Send archived message to any destination (e.g. Business Departments instead of general Compliance mailbox)
 - Filtering criteria is customizable
- 3 Fully compatible with Microsoft Exchange
- 4 SMTP routing for flexibility in choosing 'targets' to send to
- 5 Multi-Threaded, Multi-Process capability for maximum performance
- 6 MMC Plug-in for easy management

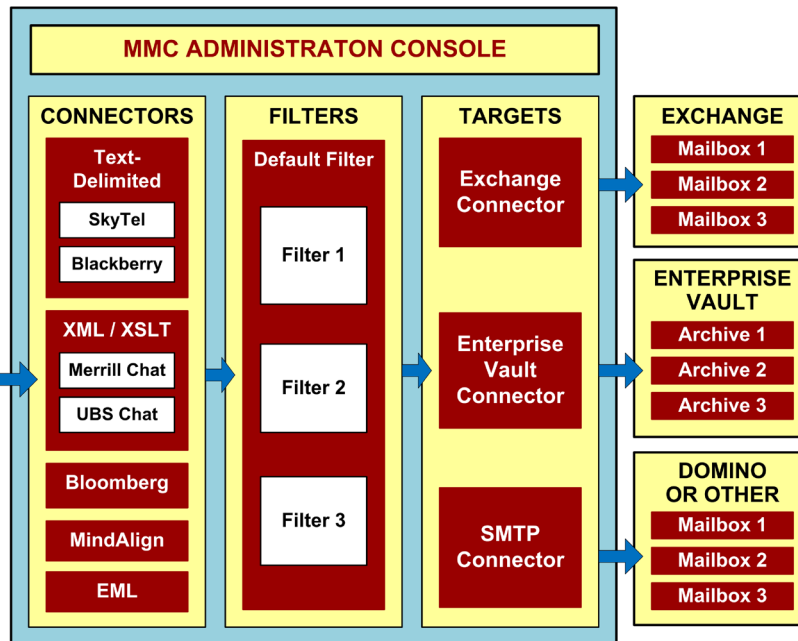

SUCCESS STORY

A Fortune 500 financial services firm wished to gain greater control over its messages for compliance and e-discovery purposes. While it was using Symantec Enterprise Vault to capture and archive email, the firm wanted to capture and consolidate other message types that were generated on disparate, legacy messaging networks (i.e. Blackberry SMS, Pagers, etc.).

Because the firm was already using Globanet's Bloomberg Importer to archive its Bloomberg messages into Enterprise Vault, it asked Globanet to come up with a solution for archiving these other message types as well.

In order to provide a comprehensive, flexible solution, Globanet architects designed and built a generic ingestion engine that could be customized to process any message type the firm required. Merge1's modular platform provided this flexibility, and created one centralized, future-proof application for ingesting any type of message.

Merge1 facilitated compliance with retention regulations and helped the firm gain greater control over its messages, resulting in reduced legal exposure, less overhead, and greater peace of mind.

ABOUT GLOBANET

As one of the first consulting firms to implement electronic messaging compliance solutions on Wall Street, Globanet has built its expertise through nearly a decade of experience. Globanet's software tools and custom services empower financial services companies to gain greater control over their electronic communications, resulting in compliance with regulations and more peace of mind.
